EDUCATION

BRAC University – B.Sc., Computer Science
Cumulative GPA: **3.96 / 4.00**.

Sep 2022 – June 2026

- Earned A grades in Programming Language I/II, Data Structures, Algorithms, Operating Systems, Database Systems, Artificial Intelligence, and in many other fundamental courses. Completed seven semesters with a 4.00 GPA. Made it to the VC's list for four semesters and Dean's list for one.

Undergraduate Thesis. *Rethinking Tokenization in Large Language Models: Efficacy, Byte-Level Alternatives, and Detecting Under-trained Tokens*. Supervised by Dr. Swakkhar Shatabda and Dr. Farig Yousuf Sadeque.

- Studied what tokenizers determine about downstream model behaviour, whether byte-level alternatives avoid common segmentation constraints, and how to detect tokens left under-trained during pre-training.

Dhaka Residential Model College – Higher Secondary Certificate
GPA: **5.00 / 5.00**.

2019 – 2021

EXPERIENCE

Undergraduate Teaching Assistant, BRAC University CSE

Feb 2025 – Jan 2026; Jul – Sep 2026

- Selected for four semester-based appointments and supported numerous students across Data Structures, Algorithms, and Object-Oriented Programming.
- Held 15 hours of consultation each week across multiple course sections, helping students trace program execution, understand data structures, and work through time-complexity analysis.
- Reviewed student code line by line, identified logical and edge-case failures, and guided students toward corrections.

Python AI Trainer (Contractual)

Jun 2024 – Present

SuperAnnotate (via GenMorphics AI Solutions contract)

- Read and refactored AI-generated Python solutions across a range of problem types, checking correctness, runtime, memory use, and boundary cases.
- Debugged logical and execution errors to produce training data for language models, with regular exposure to the mistakes generated code makes on programming problems.

PUBLICATION

Wardat Shams Iqbal, Ruwad Naswan, Swakkhar Shatabda. *CLRG at SemEval-2026 Task 3: One Size Does Not Fit All: A Resource Adaptive Framework for Dimensional Sentiment Regression*. Proceedings of SemEval-2026, co-located with **ACL 2026**. **First author**. [ACL Anthology](#)

- Co-designed AdaptStance, which routes five languages through direct regression or multi-task learning according to language-resource level, and wrote the paper and post-evaluation analysis.
- Trained five language-specific models on one NVIDIA P100 beating Mistral-314B baseline in Chinese and Swahili on the official RMSE_{VA} metric

SELECTED PROJECTS

MindWell – Employee Wellness Platform (team project). *FastAPI, PostgreSQL, SQLAlchemy, Alembic*.

- Implemented the questionnaire and escalation modules across FastAPI routes, database models, migrations, services, schemas, and a React/TypeScript questionnaire flow.
- Wrote five branching rules over PHQ-9-style questions so each session presents between 5 and 10 questions based on earlier answers.

TCGA PANCAN Gene Expression Classifier. *Python, scikit-learn, Optuna*. [\(Repo\)](#)

- Built a classification pipeline that separates five cancer types from high-dimensional RNA-Seq gene-expression data.
- Reduced over 20,000 features to 200 components through variance thresholding, ANOVA selection, and PCA.
